*M125-77 **POLYMER CONCRETE CHANNEL***

POLYMERT M125-77 polymer concrete channel provides excellent surface drainage with screwless locking mechanism.

With its modular structure and easy installation, the **M125-77** drainage channel safely transfers rainwater and waste water to the sewerage system.

Manhole boxes used together with polymer channels provide intervention when needed and the galvanised mud bucket inside facilitates cleaning.

Polymer channel are made of polymer concrete, a lightweight yet strong material. Polymer concrete is resistant to oil, petrol, acids and adverse conditions and extremely durable.

POLYMERT M125-77RK Sump provides project-specific solutions with its modular structure and simple installation.

Thanks to the sludge bucket in the manhole, it ensures safe transmission of water to the sewerage system.

The removable sludge bucket makes it easy to clean the system.
